

PAINTS, VARNISHES AND
WOOD PRESERVATIVES WITH
ALPINE COMPETENCE.

ADLER stands for experience: we are a family-run company with tradition, firmly rooted in Tyrol, where we have been working on the perfection of colour since 1934: with passion, with the spirit of research and with our lifeblood.

ADLER stands for reliability: We are familiar with the extreme outside conditions with which we are confronted in the Alpine region. That is why we produce paints, varnishes and wood preservatives of the highest quality, which can also withstand the harshest weather conditions.

ADLER stands for naturalness: we live in the mountains, and we live with the mountains. Enthusiasm for the beauty of nature and respect for it are a matter of course for us. We work according to these principles in the production and design of our paints too.

ADLER stands for inspiration: in our colours we combine traditional and modern, naturalness and design. In our "Alpine Selection" we bring the fascinating colour spectrum of the mountains to the everyday world.

The colours in the "Alpine Selection" are available in the products Aviva UltraColor, Aviva TirominColor and ADLER VariColor among others and can be tinted using the ADLER Color4You colour mixing system.

alpine selection

COLOURS ARE THE
SMILES OF NATURE

Leigh Hunt

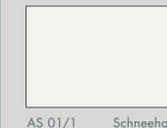

and nowhere else is this smile more brilliant than in the Alps. The colours in our mountain landscape stand for unadulterated elegance, authentic power and natural freshness. We have been inspired by the unique character of this colour spectrum to come up with the "Alpine Selection" and create 120 hand-picked colours.

The "Alpine Selection" collection invites you to discover the variety of colours in our Alpine countryside: **Muted, earthy shades** in the first range, which we modelled on snow, stones and forest floors. **Strong, modern shades** with the whole array of colours of a mountain meadow flower in the second section. And **elegant, contemporary grey tones** in all shades of rocks in the last part.

You will find 120 new, hand-picked shades in this collection: designed with the whole creativity of the ADLER design team, mixed by hand with the full experience of the ADLER colouristics department, produced for various coating systems with the complete competence of ADLER.

IMPORTANT NOTE

Slight colour differences to the original shades are caused by printing technology and cannot be subjected to complaints. To assess the final colour, it is essential to prepare a sample on the original substrate! Refer to the technical data sheets and safety data sheets. The current version can be accessed on the Internet at www.adler-lacke.com.
